AI Engineer

AI Engineer

Disclaimer: May cause uncontrollable career excitement 🤖

German Fluent Candidates ONLY Bachelor or Masters in Computer Science (related field) ONLY Up to €85,000 up for grabs!!

Plot twist: Imagine walking into work and ACTUALLY building the future of AI. Revolutionising how 50 MILLION users experience

technology. This is your ACTUAL Monday! 🍷

This team isn't just smart – they're "make other developers look like they're working with calculators" smart. Tech wizards so brilliant, they probably debug code before their first coffee ☕

My client is working on state-of-the-art Large Language Models (LLMs) and augmented generative retrieval in secure, high-performance environments. This is a remote opportunity to join a research-focused, innovation-driven team building enterprise-grade solutions for industries like finance.

What You'll Do: Evolve and optimise their AI solutions and LLMs. Pioneer augmented generative retrieval methods. Explore, evaluate, and implement the latest AI technologies. Collaborate closely with engineers on an advanced generative-first chatbot platform.

Our Tech Stack: Core: Python, PyTorch, Huggingface, Redis, Elastic. Models: LLaMA2, Falcon, and other foundation models.

What We're Looking For: Strong Python skills (C++, Rust is a bonus). Experience with generative AI in NLP and tools like Huggingface, Tensorflow, or Scikit-Learn. A research-oriented mindset and a hands-on approach. Knowledge of transformers, embeddings, and Docker/Kubernetes is a plus.

Why Join Us? You'll work at the forefront of AI innovation, developing solutions that can't simply rely on off-the-shelf APIs. This is your chance to push boundaries in secure, enterprise-grade AI applications.

Ready to build the future? Apply now!!
